

AMEGA'S Series 511 PIC-AMP does what it says:

- It allows the recording engineer to "pick and choose".
- It deletes errors on sound tracks.
- It erases unwanted recorded information replacing it with selected new material.
- It accomplishes corrections without adding "clicks" or "pops".
- It makes desired changes without inserting "dead spots".
- It can handle up to sixteen tracks in a multi-track "mix".
- It can be operated from any remote location.
- It is compatible with any system you have.

AMEGA's SERIES 511 has no match in performance, quality and price.

Send for complete catalog of recorders, reproducers, consoles and studio accessories.

Available in Canada from:
MACKENZIE EQUIPMENT COMPANY
26 Duncan Street
Toronto, Ontario (416) 364-2266.

Film House Appointment

Colin Davis.

Fussy.

There's no other word to describe how you get when you spend 7½ years in quality control with some of the best in the business.

And Colin's fussiness is one of the reasons we chose him to be our Laboratory Technical Director. He's just absolutely the right man to oversee all our processing, printing and chemistry.

Fussy.
